Convertase AG300

Convertase AG300 works best at normal fermentation pH. At temperature of a typical mash the enzyme will work more rapidly than at fermentation temperature, but it is partially unstable at the higher mash pH. Therefore the most effective way to use Convertase AG300 is to add it to wort at or near the start of fermentation. Under optimum conditions, up to 95% of the starch breakdown products present in wort can be converted to fermentable sugar.

Pack size	Application rate
55 lbs, 1L	0.01 - 0.025% on grist
